In Floor Air Cup Ventilation

Uniform and Permanent

Our In Floor Air Cup ventilation system provides uniform, permanent air flow across your storage floor. The air cup ventilation system allows for a smooth storage floor where equipment and staff can work freely. The concrete floor is poured over the air cup system to provide a permanent and protected ventilation system. Our design allows bulk or boxed products to be piled directly on the floor without inhibiting the balanced air flow in your facility. Cleaning is accomplished through high pressure washouts and sloped tubes that drain into the air plenum for clean out.

Techmark's In Floor Air Cup ventilation system has been installed in many storage types throughout the world. For more information visit our website at www.techmark-inc.com or call us at 517-322-0250.

“Installation of Techmark’s In Floor Air Cup system is comparable to an in floor trench system but the benefits are greater”

Brian Sackett
Sackett Potatoes, Michigan
